I am a highly motivated and energetic individual who thrives in the face of challenges. With exceptional work ethic and strong communication and teamwork skills, I bring a winning combination of determination and collaborative spirit to any project I undertake. I am confident in my abilities, and I always strive to add value by delivering quality work that exceeds expectations. At the same time, I recognize the importance of continuous learning, and I am always open to new ideas and feedback. I believe that my skills and attitude make me a strong asset to any team, and I am eager to contribute to your organization's success.

2018 - Matric

2021 - Diploma in Software Development

2022 - Intern Developer

2023 - Junior Developer

Experience

Web Development

My expertise primarily revolves around web development, with a focus on mastery of HTML, CSS, and JavaScript. I have also gained experience with popular frameworks, libraries, and tools, such as React and Wordpress.

In fact, I have contributed to several successful website builds using these skills, some of which include:

1. <https://factsa.co.za/>
2. <https://aehdigital.co.za/>
3. <https://thetibbdoctor.co.za/>

These projects showcase my ability to work with complex requirements and deliver exceptional results that meet the needs of clients and users alike. I am passionate about creating intuitive and engaging web experiences, and am always looking for new challenges to expand my skills and contribute to innovative projects.

Cloud

While my experience with AWS is still limited, I have gained valuable hands-on experience with several cloud services offered by AWS, including RDS and EC2 instances. In fact, I leveraged these skills to develop a system that saved my previous employer over R100K per year. The system integrated with a 3rd party API to retrieve and store data in the cloud, which was then visualized in Power BI for easy decision-making by relevant parties. My ability to understand and leverage these cloud services, in combination with my knack for problem-solving and creative thinking, allowed me to drive this project to success. I am eager to continue learning and growing my AWS expertise, and am confident in my ability to deliver value to any team or organization.

Telecoms

I was thrilled to have the opportunity to work with a company under the Accenture umbrella, and I jumped at the chance to join the team. As a network testing engineer, my role was to ensure the smooth and efficient operation of large-scale ISP networks for major companies such as Vodacom, MTN, CELL C, and Telkom. My responsibilities included designing and implementing test plans, identifying and resolving network issues, and communicating with clients and team members to ensure that projects were delivered on time and within budget.

Through this experience, I developed a deep understanding of network technologies and gained valuable insights into the complexities of working with large-scale systems. I am proud of my contributions to this important work, and I am eager to apply my skills and expertise to new challenges and opportunities in the future.

Microsoft Power Platform

I have extensive experience working with Microsoft technologies such as SharePoint, Power Automate, Power Apps, and Power BI. Using these tools, I have built multiple internal systems for businesses, automating everyday tasks and streamlining their processes.

Some of my most notable projects include an automated claims system that helped finance teams process claims more efficiently, a fleet management system that alerted fleet managers to any vehicle issues, and an inventory management system that provided real-time tracking of all business assets. I have also developed a ticketing system for IT teams to manage help desk tasks and ensure timely resolution of issues. My deep understanding of these technologies, combined with my creative problem-solving skills, allowed me to deliver successful solutions that increased efficiency, reduced costs, and improved overall business operations. I am committed to staying up-to-date with the latest tools and trends in the field and am always eager to deepen my knowledge to deliver even more value to my clients and employers.

MY 10 YEAR PLAN

for the next 5 years i aim to gain industry knowledge to better understand how businesses work and how i as a software developer can continuously improve , with that knowledge i the aim to venture out and start my own Tech company , with the goal of changing peoples lives for the better , watch the space
